

## The Financial Head of the Indonesian Ciburial Group monitors the performance of its companies with Prelytis LiveDashBoard.

Prelytis, next generation Business Intelligence software vendor, answers with great success to the needs of this industrial Group.

In the framework of its growth development, the Ciburial Group has launched a sustained growth policy, via numerous acquisitions in Indonesia.

The Financial Head of the Group wanted to measure in the most efficient manner the performance of the companies acquired, using a tool that could take up their specific needs. Indeed, as a decentralised organisation, it was crucial for Ciburial to get an up-to-date and real-time visibility of the financial health and stability of every single company.

After an extensive evaluation, the Prelytis platform was selected for its advanced features, its easiness of use & implementation, and for its capability of retrieving meaningful indicators, pre-configured by the Financial Head of the Group (comparative analysis over time, key data, etc.). The business standpoint, synthetic, collaborative and intuitive of the Prelytis LiveDashBoard turned to be the most important criteria for Ciburial.

Beyond monitoring the performance of each company, and the analysis of their past activities, the Ciburial Management chose LiveDashBoard to empower and give even more responsibilities to the Heads of each company.

This setup illustrates in the most pragmatic manner, the capacity of Prelytis to efficiently accommodate with large dashboarding projects run by Financial Heads.

Kilin Widjaja, CFO at Ciburial, says "After having looked at various solutions, LiveDashBoard quickly appeared to fit best with our project and requirements. Its ability to take our infrastructure, various data sources, and IT skills as they were, enabled us to have access to real-time dashboards, for a project cost 2 to 3 times lower than with traditional or open source BI solutions"
